Medical Management Plan 2017 – 2018
China

About the Medical Management Plans

This document explains the bigger picture of our projects in China and how the combined daily tasks of all of our volunteers help us to achieve long term goals. By following Task Lists, our volunteers work towards our Goals, through which we contribute to our Medical Programme Mission which combined with our other projects, helps us to reach our Company Mission.

Here we will lay out the priorities, resources, monitoring tools and evaluation systems used to make our ambition a reality.

Our Resources

<table>
<thead>
<tr>
<th>Human Resources</th>
<th>Physical Resources</th>
<th>Online Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Volunteers are of course our primary resource to achieve our goals. We welcome over 2,300 Medical volunteers per year globally. • The staff at our placements support and facilitate our actions • Over 600 Projects Abroad staff members provide the structure we need for worthwhile projects.</td>
<td>• With over 50 Projects Abroad offices worldwide, there is always somewhere for volunteers to work together and share experiences • We provide all necessary materials for medical outreaches</td>
<td>• Our Volunteer Resources Database shares thousands of ideas among our community • Online reports are used to track our projects all over the world • Personalised MyProjectsAbroad webpages prepare each volunteer for their Medical project.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Financial Resources</th>
<th>Intangible Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Funds for all of Projects Abroad’s work come solely from volunteer placement fees. These are distributed via monthly budgets, to ensure fair allocation of funds for each destination. • Occasionally the Projects Abroad community may send donations directly for a specific placement or project.</td>
<td>• The good reputation of volunteers in local communities is what makes our work possible. This reputation has been earned over years of dedicated volunteer contribution. • This is supported by the combined knowledge of our extensive staff network.</td>
</tr>

Our Medical Management Plan Goals in China for 2017-2018

The following goals have been selected from a list of seven by our local staff and partners. Each placement and volunteer may be working on one or more of these goals, in line with our Medical Ethics Policy and taking into account the volunteer’s qualifications and level of experience. We arrange workshops, outreaches and assist with independent research projects as a means of working towards each of these goals.

**Encourage an Understanding of Medical Practices and Promote an Exchange of Medical Knowledge**

Many of our Medical volunteers have no or little experience within the medical field. Due to strict rules and regulations, medical volunteers will primarily observe, but will learn plenty from the doctors and nurses they will be shadowing. Their project allows them to gain invaluable insight into the healthcare system and procedures within a developing country, as well as prevalent local diseases. We aim to create a platform for a true cultural exchange, with volunteers learning from local staff as well as sharing their experiences with one another. Volunteers can work on a chosen research topic to draw up useful learning materials and resources to share.

**Promote Awareness of Non-Communicable Diseases**

Non-Communicable Diseases (NCDs) are the primary cause of death around the world, with over 35 million deaths each year. NCDs are estimated to account for up to 87% of deaths in China, with cardiovascular diseases alone representing 45% of that amount. Changes of lifestyles have increased the risk of such diseases, and raising awareness about the severity of these healthcare problems is key in tackling them. Our volunteers will attend medical workshops to learn more about key NCDs. We then aim to educate and raise awareness on these diseases as well as promote healthier lifestyle choices to limit their growth during health education campaigns and clinical sessions.

**Improve Hygiene Standards**

Access to hygiene and adequate sanitation has long been linked to community health, education and overall development. Despite being a modern, cosmopolitan city, standards of cleanliness and sanitation within different public institutions (hospitals, schools, care centres) in Shanghai do vary significantly, and can often be quite poor. Teaching children good hygiene practices from an early age, though, is key to improving their opportunities later in life. Our volunteers help to educate, raise awareness and run activities, as well as encourage people in their surroundings and work placement, to promote proper hygiene with the aim of improving the overall health of the population.

**Improve Access to Basic Healthcare for Disadvantaged Groups**

Despite significant improvements in this area, access to basic healthcare does remain a challenge for certain vulnerable groups, such as specialist care for those living with disabilities. Our volunteers in Chengdu have the opportunity to support one of our local care placements, a centre for children with Autism. Through our weekly outreach programme of visits to communities or such centres, we aim to provide free basic healthcare to some of these vulnerable groups as well as raise awareness about some of the more pressing health issues facing the country.
Our Medical Programme Mission is to enable an exchange of medical knowledge and facilitate a greater understanding of global healthcare practices. By empowering local communities, we aim to improve standards of health through awareness, prevention and treatment.

How we achieve our goals

Assessment
Through specially designed reports and structural research, we pinpoint locally relevant issues. This information will help us determine the methods and areas for intervention within local communities.

Identify areas of need
Through research and data gathering, we can identify the areas that most need human or material resources. This helps volunteers to know which healthcare topics need further education as well as which ailments are most affecting local communities, so that targeted intervention can be organised.

Assess
- Country data & statistics
- Medical reports data
- Placement visits

Identify areas of need
- Country & community data
- Staff and volunteer feedback

Targeted Intervention
- Application of plans
- Assessment of impact through Outreach reports

Planning & Training
- Workshops
- Tasks List
- Resources: Volunteer Resources Database + office materials

Targeted Intervention
Through our steady stream of volunteers year round, we are continuously targeting the areas of need determined by our data. Although a 4 week volunteer might not see a tangible difference in the time they are there, we are able to show that over longer time frames each and every volunteer contributes to long-term, sustainable impact.

Planning and Training
Based on the areas of need we create Task Lists, workshops and community outreaches to direct our impact to where it is most needed. Resources are designed by volunteers and these are shared on the Volunteer Resources Database.
